

POLICY - 3.4.3 - MOTOR OPERATION INSIDE STATION
SCOPE - ALL PERSONNEL

Whenever a piece of motorized apparatus or equipment is to be started and/or run while inside a fire station, the apparatus bay door(s) shall remain in the open position throughout the period of operation. The door(s) shall remain open for a period of time after the motor is shut off to allow for adequate clearing of the air.

The only exception to this rule is when there is in place a device or system which will adequately allow any exhaust fumes to exit the station.

Care must be exercised to ensure that exhaust fumes do not contaminate other portions of the station.
